SYMBOLS

The following are the only symbols used for the purposes indicated below:

- (D)** - Delete or Discontinue
- (I)** - Change Resulting in an Increase to a Customer's Bill
- (M)** - Moved from another Tariff Location
- (N)** - New
- (R)** - Change Resulting in a Reduction to a Customer's Bill
- (T)** - Change in Text or Regulation but no Change in Rate or Charge.

When changes are made in any tariff sheet, a revised sheet will be issued canceling the tariff sheet affected. Changes will be identified on the revised sheet(s) through the use of the above mentioned symbols.

TARIFF FORMAT

- A. Page Numbering** - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially, however, new pages are occasionally added to the tariff. When a new page is added between pages already in effect, a decimal is added. For example, a new page added between sheets 14 and 15 would be 14.1.
- B. Page Revision Numbers** - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page version on file with the Commission. For example, the 4th Revised Page 14 cancels the 3rd Revised Page 14. Because of various suspension periods, deferrals, etc. the Commission follows in their tariff approval process, the most current page number on file with the Commission is not always the tariff pages in effect. Consult the check sheet for page currently in effect.
- C. Paragraph Numbering Sequence** - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:
- 2
 - 2.1
 - 2.1.1
 - 2.1.1(A)
 - 2.1.1(A)(1)
 - 2.1.1(A)(1)(a)
 - 2.1.1(A)(1)(a)(I)
- D. Check Sheets** - When a tariff filing is made with the Commission, an updated check sheet accompanies the tariff filing. The check sheet lists the pages contained in the tariff, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on the check sheet if these are the only changes made to it (i.e., the format, etc. remains the same, just revised revision levels on some pages). The tariff user should refer to the latest check sheet to find out if a particular page is the most current on file with the Commission.

3.4 Calculation of Distance

For services which are distance sensitive, usage charges are based on the airline distance between the serving wire center locations associated with the originating and terminating points of the call.

The distance between the originating and terminating points is calculated by using the "V" and "H" coordinates of the serving wire centers as defined by Telcordia, in the following manner:

- Step 1:** Obtain the "V" and "H" coordinates for the serving wire center of the Customer's switch and the destination point.
- Step 2:** Obtain the difference between the "V" coordinates of each of the Rate Centers. Obtain the Difference between the "H" coordinates.
- Step 3:** Square the differences obtained in Step 2.
- Step 4:** Add the squares of the "V" difference and "H" difference obtained in Step 3.
- Step 5:** Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.
- Step 6:** Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating serving wire centers of the call.

Formula:

$$\sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$
